

Kamiar Radnosrati

LEAD DATA SCIENTIST & AI DELIVERY LEAD

Stockholm, Sweden

☎ (+46) 76-5843-803 | ✉ kr.nosrati@gmail.com | 📱 kamra34 | 🌐 kamiarradnosrati

Summary of Qualifications

- Highly accomplished AI and Analytics leader with a PhD in Electrical Engineering and a proven track record of delivering large-scale data and AI programs..
- Skilled in defining roadmaps, driving end-to-end delivery, and ensuring timely execution by coordinating with SI partners and cross-functional business units (sourcing, legal, sales).
- Strong background in statistical modeling, advanced analytics, and AI.
- Hands-on experience architecting and automating workflows using LLMs, Generative AI, and Agentic AI solutions on AWS (Bedrock, SageMaker, Lambda, Step Functions).
- Recognized for strong stakeholder engagement and business requirement delivery, aligning AI solutions with strategic business priorities and presenting insights to executives.
- Passionate mentor and communicator, coaching teams and leading workshops.

Professional Experience

Lead Data Scientist & AI Delivery Lead

ERICSSON

Stockholm, Sweden

Nov. 2019 - Present

- Directed AI and data science programs with a mix of strategic delivery leadership and hands-on technical contributions.
- Delivery & Stakeholder Management
 - Defined delivery roadmaps, aligning sourcing, legal, and sales priorities with AI capabilities.
 - Coordinated with SI partners to ensure on-time delivery, scope alignment, and integration with Ericsson systems.
 - Collected and translated business requirements into actionable AI/ML solutions, ensuring stakeholder alignment.
 - Oversaw integration of data flows across Snowflake, Azure Blob, and downstream analytics platforms.
- Product Management
 - Structured large-scale AI projects into actionable workstreams with measurable milestones.
 - Led cross-functional teams (ML engineers, solution architects, UI/UX designers, and data scientists).
 - Oversaw technical requirements while contributing hands-on to ML and LLM-based pipelines.
- Technical Leadership
 - Guided teams in applying data science and LLM methodologies to complex enterprise challenges.
 - Mentored contributors from software engineers to solution architects.
- Technical Contribution
 - Developed and optimized advanced ML, simulation, and LLM-based pipelines for large-scale contract analysis.
 - Automated data workflows, significantly improving scalability and efficiency.
 - Built an LLM-based contract insights system on AWS (Bedrock, SageMaker, Step Functions) with RAG for real-time querying.
 - Designed and deployed Agentic AI solutions on AWS for in-house contract analysis systems.
- Key Achievements
 - Delivery Impact: Successfully managed end-to-end delivery of digital contract AI programs.
 - Leadership Recognition: Awarded multiple Impact and Key Contributor Awards for driving innovative AI solutions.
 - Mentorship: Supervised MSc thesis students and mentored junior team members.

Researcher

LINKÖPING UNIVERSITY

Linköping, Sweden

Feb. 2015 - Nov. 2019

- Engaged in advanced research in machine learning and signal processing, balancing teaching responsibilities and academic research.
- Conducted research on Bayesian and non-Bayesian methods for parameter estimation and statistical testing, designing and implementing advanced statistical and machine learning algorithms for localization and positioning challenges.
- Co-supervised Master's theses guiding students through complex research projects.
- Authored three journal articles in esteemed publications, including IEEE Transactions on Signal Processing and Transactions on Vehicular Technologies.

- Advanced from Research Trainee to Data Analytics Engineer, focusing on network performance analysis and the quality of multimedia applications experience.
- Collaborated on the development of network probes in C++, later transitioning the system to JAVA for data analysis and report generation.
- Contributed as a team member in projects assessing the quality of experience for multimedia applications, involving innovative experiments like brain signal analysis.
- Actively participated in international projects, including EU Celtic plus QuEEN and an ESA telemedicine project, developing tools for Quality of Experience (QoE) estimation.
- Led the translation of a critical network probe from C++ to Java and contributed to developing a tool that integrated user experience with technical network data, enabling advanced QoE assessment methods.
- Contributed to high-profile EU and ESA projects.

Education

Ph.D. in Automatic Control, Electrical Engineering

LINKÖPING UNIVERSITY

Linköping, Sweden

Feb. 2015 - Nov. 2019.

M.Sc. in Information Technology, Communications Engineering

TAMPERE UNIVERSITY OF TECHNOLOGY

Tampere, Finland

Aug. 2011 - Jun. 2013.

Core Skills

Technical Proficiencies:	Professional Skills:
• Python, R, MATLAB, SQL • Machine Learning, Generative AI, AI Agents • Data Visualization with Tableau, Power BI • Containerization and Orchestration • CI/CD pipelines, MLOps practices • Managing and Deploying Cloud Infrastructure	• Strong organizational, management and leadership skills. • Strong strategic project planning skills • Strong machine learning skills with 10+ years of experience • Strong project management skills, including project structuring and managing multiple work streams • Strong analytical skills and statistical knowledge
